How Activity Can Be Started and Completed Expeditiously

The project adds one new police officer position and fills one police officer and one Records Supervisor vacancy. It will begin immediately upon grant award by filling the positions. Offsetting furlough costs will begin immediately upon approval of this grant by revising deployment schedules. The program will be completed when City revenues have increased sufficiently to incorporate the new positions into the City budget and rescind the furlough mandate or when the grant period ends. See "Position Retention after Close of Grant Period" below for details on how the City will retain the employees.

Selection Criteria 2: Program Design and Implementation

This project will contribute to the goals of the Recovery Act by creating one job, retaining two employees and stabilizing our City budget through reduced personnel costs. It will meet the Category 1 goal of preventing and responding to rural crime by increasing the officers deployed to the field. The likelihood of successfully hiring, training and deploying personnel is 100%. Success in stabilizing the budget is largely dependent on the recovery of the overall economy. Diligent monitoring of revenues and expenditures will identify areas in the budget to be realigned to reach stabilization. This project will increase field deployment, which should deter crime and inspire public confidence. Having acceptable levels of staffing will enhance officer safety and provide time to train and supervise our officers properly. Reaching these staffing levels will be accomplished through the three components of this project. Component one is to create a new police officer position. The second component is to fill existing Police Officer and Records Supervisor vacancies. The final component is offsetting the costs of mandatory furlough hours.

Component One: Create New Police Officer Position

Having one officer on loan to the Multi-Agency Narcotics Task force has created a shortage in deployable field officers. Because narcotics are one of the County's major law enforcement problems and the Task Force is critical to keeping it under control, we considered it a priority to participate in the program. Until the recent budget shortfalls, we covered the shortage adequately through overtime and using paid reserve officers. In 2007, it was determined that there was sufficient revenue to add an additional police officer position to cover for the loaned officer. At the beginning of 2008 the City had revenue reductions and did not add the position. Using this grant to create a new police officer position will bring our field officer strength up to seven officers. This number of officers will provide a level of deployment that accommodates training, vacations and holiday time off without creating a reduction in our service. As can be seen from the below table, even with seven officers we are six days short of optimum deployment. This shortage will be covered by paid reserve officers, or if reserves are not available, by overtime.

Officer days needed per Pay	y Period (PP)	Officer days available per PP with 7	Difference
for field deployment		officers	
Weekdays 3 officers x 10 days	30	Officers are on 12 hr shifts = 6-12 hr days and 1-8 hr day worked in a PP.	
Weekends 4 officers x 4 days	16	12 hr shifts allows overlap for officer safety	
Total field days	46		
Coverage for vacation, holiday, training time off	9		
Total	55	49	-6

The expected outcome of adding this position is to increase our officer deployment and eliminate a reduction in our service to the community. This component of our project will contribute to the

Recovery Act goal of creating jobs. It will meet the Category 1 goal of preventing and responding to crime by putting more officers on the streets.

Component Two: Fill Positions Held Vacant by Budget Shortfalls (2 Positions)

In 2008, a Police Officer and Record Supervisor position became vacant. Due to budget shortfalls it was determined the positions should remain vacant. The Records Supervisor is a non-sworn position and provides the only support staff in the Nevada City Police Department.

The Record Supervisor duties are critical to the operation of the Department. With the Record Supervisor position vacant, it has been necessary for administrative and field personnel to perform the duties and to close the front desk to walk-in traffic a great deal of the time. This results in reduced service to our citizens, less proactive patrol time and a backlog of essential administrative work. Providing support staff puts officers back in the field, frees sergeants from clerical duty so they have time to train and supervise their subordinates and gives management staff time to complete administrative duties and oversee Department operations. The vacant police officer position contributes to all of the problems mentioned previously, mainly causing reduced visible patrol time, hampering our ability to prevent crimes, in particular property crime, and enforce traffic laws. This component of our project will meet the Category 1 goal of preventing and responding to crime and the Recovery Act goals by reinstating two positions.

Component Three: Offsetting Costs of Furlough Days

In April 2009 due to budget shortfalls the City Manager and City Council mandated that all City employees take eight hours unpaid furlough per month. With this mandate, it has become a challenge to deploy an adequate number of field officers while covering vacation, holiday and training time and adequately perform supervisory and management duties. This component of

Attachment 2 Program Narrative

Recovery Act CDFA 16.810

DUNS# 830274952

our project will fund the mandated furlough time for eight positions. It will contribute to the

Recovery Act goal of stabilizing the local government budget without reduction of essential

services. Although this component does not create or retain a position, it reinstates 768 work

hours each year, 1,536 over the length of the project if the total time is needed, slightly more

than one part-time employee. This component meets the Category 1 goal of preventing and

responding to crime by increasing our deployment levels.

Position Retention after Close of Grant Period

The City Manager believes the budget shortfalls will be resolved within two years by increased

revenue and the stabilization achieved by this grant, affording retention of the grant-hired

personnel. If revenue does not increase sufficiently the City is looking at several recourses,

some of which may be instituted even before the grant period begins. One is retirement of the

two eligible police employees, another is reducing employee benefits and a third is implementing

service fees for certain types of police responses, instituting business taxes and contracting some

City services. One police management employee has already committed to retire within the next

18 months. Replacing that employee will leave some salary savings to go toward the retention of

the grant hired personnel. If the replacement is promoted from within, there will be additional

salary savings toward covering the retention.

Project Objectives and Performance Measures

Page 5 of 8

Objective: Increase Deployment

Complete hiring process (Advertise, test, screen, hire) by week 8

Train personnel: A. Officer – 10 weeks B. Records Supervisor – (off-site 1 week)

Deploy 46 field officer days each PP by week 20

1st yr increase officer initiated activity 40% over same PP previous year by week 21

2nd yr maintain or increase officer initiated activity level

80% of desk hours handled by Records Supervisor or Cadet by week 10

Personnel attend 100% of training scheduled each month

Selection Criteria 3: Capabilities/Competencies

The Chief of Police will be responsible for management of this project. The Lieutenant will have the responsibility of ensuring deployment meets the objectives and is properly documented. The Record Supervisor will assist in compiling and checking data. Financial management staff will create a unique fund number to track drawdowns and expenditures and keep this funding separate from other funding. Audits will be performed by assigned staff before each performance report to identify and correct any discrepancies.

Selection Criteria 5: Impact/Outcomes, Evaluation, Sustainment, and Description of the Applicants Plan for the Collection of the Data Required for Performance Measures

This Department certifies it is willing and capable of participating in an evaluation to be managed by the National Institute of Justice. Although the Department has not participated in prior evaluations, it does use data management systems to collect data for various statistical reports and has participated in small grant awards that required project managers to ensure adherence to grant guidelines.

How the Program's Effectiveness will be Demonstrated

The program's effectiveness will be demonstrated by deploying 46 field officer days a pay period and having a 40% increase in officer initiated incidents; by having 100% compliance with

DUNS# 830274952

State mandated training; by the Records Supervisor or Cadet covering desk duty 80% of the

time; and, by reaching a financially solvent level to retain the grant hired employees.

The Program's Impact on Assisting Rural Law Enforcement

The program's impact on assisting rural agencies is tremendous. Most often small agencies with

low crime rates, such as ours, do not qualify for grant funds. We work hard to maintain our low

crime rate and keep costs down. A low crime rate is a pivotal factor that attracts individuals to

our community. This project will provide a significant boost in our ability to prevent and

respond to crime.

Data Collection, Analyzing and Reporting

Data that will be collected

The data that will be collected is the number of jobs prevented from being eliminated (by type);

the number of jobs reinstated; percent of essential services maintained; and, the number of

collaborative partnerships formed due to Recovery Act funding. For BJA specific objectives

reports will contain the number of submissions to an intelligence database and the number of tips

referred to other agencies. Project specific data collected is the number of hours officers were

deployed, in what capacity and the number of officer initiated activities.

How data will be collected

Computerized timesheets and DFARS will provide deployment data, assignments and

intelligence or tip information relayed. The Lieutenant will verify the information. The time

sheets will be forwarded to payroll to have the time allocated to the grant appropriately. The

Records Supervisor will obtain the number of officer initiated incidents from the Computer

Aided Dispatch system. The Lieutenant will assign and track training.

Page 7 of 8

How data will be assessed and analyzed

The Chief of Police and the Lieutenant will work together to compare performance measures to actuals each month. They will review the number of officer days fielded, the number of training days officers attended and the amount of time officers were required to work the front desk. This will be done before each deployment period so that adjustments can be made if necessary. A successful outcome for this performance measure will be reaching the goal of 46 field officer days deployed and officers attending 100% of the training. Management and supervisors will analysis officer initiated activity to show a correlation with field time. The more field time the more activity. When this does not occur analysis will be conducted to determine the reason and if there needs to be a realignment of goals. For the first year of the project, a successful outcome in measuring officer initiated activity will be a 40% increase over the same time period in the previous year (after initial 10 week training of new officers). After the first year it is expected that sustained increased deployment will establish a ceiling for officer initiated activity so a successful outcome for the second year would be maintaining or increasing the number over the previous year.
